DESCRIPTORS: Therapy, *Asthma, *Air, *Ions,
Particles, Blood chemistry.

Light air ions with a negative sign, utilized without the use of side physical influences or chemical substances, possess a certain physiological action. When a therapeutic dose of light air ions with a negative sign (about 100-150 billion in one session) is utilized, the composition of the blood improves and the resistance of the serum colloids becomes stabilized. The course of treatment for bronchial asthma consists of 10-30 sessions; (Biological Sciences--Pathology, ТГ, v. 9, no. 5)(over)
